What's new in InEight Document Project Service Portal 25.11

- **General:**
 - Support for other languages. [Read more](#)
 - Improved user session management. [Read more](#)
- **Project Customizations:**
 - Set default values in drop-downs. [Read more](#)
 - Customize document comment screens. [Read more](#)
 - Customize notification subject lines [Read more](#)
 - Update to Generate Customization Specifications [Read more](#)
- **Incident Fixes**
 - A list of incidents fixed in this release. [Read more](#)

General

Updated Language Support

The PSP will support Unicode so that additional language characters such as Japanese are supported in configuration table names and field captions.

After creating the new configuration table or module field in English, you can alter the caption of the field to be in the required language.

Improved User Session Management

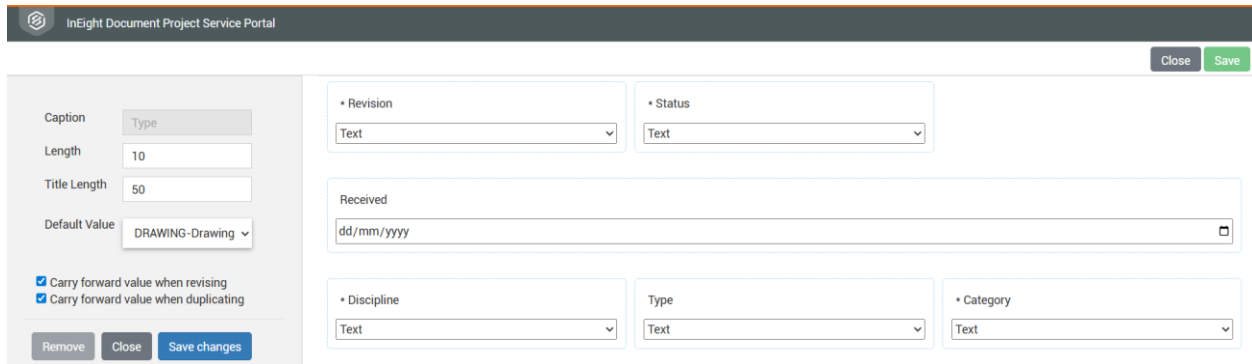

Previously user sessions expired frequently in PSP. With this update user sessions will allow for longer valid sessions preventing the need to relog in after a short period of time.

Project Customizations

Set Default Values in Drop-Downs

The PSP will now support the ability to set a default value for configuration table related drop-down controls in project customizations. This is initially supported in the Documents module and will be available for the other modules in an intermediate release.

Once the field is added and published to Document, and the configuration table values are defined, you can come back into PSP and define the default value via the field edit screen.

The screenshot displays the 'InEight Document Project Service Portal' interface. At the top right, there are 'Close' and 'Save' buttons. The main area shows a configuration table with the following fields:

- Revision**: A dropdown menu with 'Text' selected.
- Status**: A dropdown menu with 'Text' selected.
- Received**: A text input field with a date mask 'dd/mm/yyyy' and a calendar icon.
- Discipline**: A dropdown menu with 'Text' selected.
- Type**: A dropdown menu with 'Text' selected.
- Category**: A dropdown menu with 'Text' selected.

On the left side, there is a configuration panel with the following settings:

- Caption**: Type
- Length**: 10
- Title Length**: 50
- Default Value**: DRAWING-Drawing
- Carry forward value when revising
- Carry forward value when duplicating

At the bottom of the left panel are 'Remove', 'Close', and 'Save changes' buttons.

Update to Generate Customization Specifications

The specification generation now includes the designs of the input screens and output templates for the customized modules.

Document Comment Screen Customizations

Customizing the document comments screen is now supported within the PSP. There are 2 options for both the new comments and comment response screen. In addition to this the user is given the ability to re-arrange the fields in the review coordinator comments screen.

When a field is added to the new comments screen it will automatically be added to the comment response screen and review coordinator screen. You also have the ability to add a field just to the comment response screen, if required.

Project Customization
Publish Customizations

- Manage Configuration Tables
- Create Document Module Fields
- Create Mail Module Fields
- Create Transmittals Module Fields
- Create Package Module Fields
- Create Defects Module Fields
- Create Lot Module Fields
- Create Vendor Data - Contract Fields

Customize Notification Subject Line

Notification subject lines can now be customized in the PSP. The default notification subject will be included and then users can add additional data using the builder. The builder works similar to the auto numbering definitions in project settings.

This can be done for all or selected notifications in a module. Only one customization format can be defined per module.

Define custom notification subject line
✕

* Module

Document ▾

* Field selection

Select Field ▾
